

The Directive

The Situation

There are phenomena without explanation that we deal with on a regular basis that are difficult to qualify or quantify that cause a great unrest in our world. We attempt to address this issue here with solutions, and an explanation of the problem.

The Solution

The solution we have on the table at this time is based on Information Theory. It has already been tested and found efficacious.

A lesser example is the web site you are reading this on, that we have found that the best way of fighting paranoia is by distribution of accurate information, basically short-circuiting the deleterious energy that is hurting us.

Strategy

Our strategy is simple, even basic:

What is hurting us is studies into advanced physics, specifically the discovery of the Higgs Boson. The “God Particle,” as it’s called, is a Rosetta stone that nature has given us to understand all of reality, which includes consciousness.

Unfortunately, any civilization that participates in this research is doomed to suffer our fate, nightmares during waking hours, flagging economic systems, sleep disorders, violent insanity, debilitating hallucinations and paranoia.

The problem is that our scientific establishment has found it impossible to successfully *collectively* work on this issue. However, this has not stopped quite a few of us *individually* from working the problem on our workstations, advanced physics, telescopes and small groups. We at least know the root of the problem now.

Human beings are curious; they want to know. There are even indications that this phenomenon is what caused early man to believe in spirituality. But its dangerous to be in direct contact with it, at these levels of intensity.

Here is a strategy, called “**The Directive**”

Discovery

What I am suggesting is counter-intuitive. What we need to do is penetrate further into the issue, not retreat from it. If we retreat, the scientific establishment will continue to fund and research the very sources of information that is keeping us connected to this negative phenomenon maybe for decades, centuries to come.

What we need to do is prove it quickly with the bleeding-edge advanced hypothesis and theories that we have here and there, so the curiosity of mankind can be satiated on the subject.

Discovery includes cosmology, penetrating the nature of dark matter, how it “interacts” and its quantum mechanical implications.

Analysis

This stage is about (1) gaining maximum benefit from our research while (2) minimizing the costs of it.

This is a necessary step in satiating the scientific curiosity of mankind which is necessary for our scientists, doctors and leaders to drop the issue entirely, severing the information link that is killing us.

This stage represents the most dangerous phase of the Directive.

Closure

Once we have discovered the mystery of the Higgs Boson and a few other subjects, then we can reach closure on this issue. A recognition of the cause of our situation leads to a cultural shift away from certain avenues of scientific research. Funding is terminated, and dangerous areas of study are forbidden as it has a strong tendency to re-establish the link with the Prime Intelligence, as it is called.

The Warning

We cannot responsibly allow our descendants to fall into the same mire we have.

We have formulated a strategy that involves the world-wide distribution of mass produced ceramic disks with a warning on it to NOT follow our research into certain specific areas delineating the inevitable consequences of such a choice.

Question and Answer

Q: If we know that the root cause is certain avenues of scientific research, then why don't we just choose to not work on these things? Wouldn't this "close the door" to what we are "connected to"?

A: The problem is insidious as a lot of you already know. It deals with metaphysics, one day we are feeling good the next confused and fearful. We can't ever get a good "lock" on exactly what is going on. Real issues such as wages, government funding take precedence in these situations, rather than the hunches and guesses that merely indicate that it might be dangerous.

While we agree with your logic, our understanding of the group psychology involved indicates that this is not a realistic path to success.

Q: Is there a way of completely severing the link that you are talking about?

A: We want to be perfectly clear on this point. We are supposed to be connected with this, just not at the levels of intensity that we are experiencing.

To completely sever the link could lead to an even worse situation occurring. What we are advising is a reduction in the intensity of the connectivity so levels approach normal.

Q: What exactly does the research that you are talking about indicate?

A: We struggled with the idea of not telling people the whole truth because of the fear that it would be rejected, but you do have a natural right to know.

This is *exactly* what our lines of research are telling us: discovery of the Higgs particle basically inducts us into a group of scientific civilizations that have all made the same discovery. So you don't have to read between the lines, I mean extraterrestrial. They are civilizations on other planets very similar to our own, at the same level of technology and scientific understanding as us.

Now you are seeing why we initially thought not to tell you; it is rather fantastic.

Knowing what we do at this point in history inducts us into a greater, 4-dimensional group of people via information theory. However the intensity of coming into intimate contact with this much intelligence is painful and deadly.

Here is a list of the lines of scientific research that have to be curtailed in order to slowly extract our planet from this situation:

- Higgs Boson research (ie CERN LHC being about the largest single body involved)
- Dark Matter / Dark Energy research (ie. Cosmology mixed with Advanced Quantum Mechanics)
- Possibly Cold Fusion (Hot fusion research might be OK).
- Possibly SETI projects such as large arrays of radio telescopes looking for other civilizations

By successfully completing the Directive, we can extract ourselves informationally (which is the

identical process to how we entered this situation) and so long as we don't actively work on these things, we will be rendered immune to these effects.

Society will return to normal, paranoia will subside and the economy will improve. Individually, you will notice that your anxiety, fatigue and headaches will go away.

Q: You are right about it being counter-intuitive, the Directive as you have put it says that we have to penetrate deeper into the very subject that is destroying us. Wouldn't this lead to even stronger intensities?

A: Yes, it would in the short-term. However its like putting a splint on a broken leg. Its painful, but it has to be done.

To not do what we have proposed would lead to a continuing, chronic situation where the scientific establishment would continue to dabble with these ideas keeping us connected. All that is necessary to keep the connectivity at these levels is for one scientist to continue research. If we came to a collective conclusion that such research was dangerous and thus discouraging it at an institutional level, then we would have a chance of “closing the door” as it is put.

Q: Can you explain, hopefully in layman's terms, exactly what is going on, scientifically?

A: Yes, you have a right to know.

Our world is connected to other worlds and times via a system of dark matter hairs.

Their existence has been proven by analysis of data from mundane space probes orbiting Earth through gravimetric and gamma/x-ray analysis by our leading scientists. It connects to a larger body of “interacting” dark matter larger than our galaxy forming basically a rotating donut shape. It has always been there, but its only recently, due to advances in cosmology and astronomy that we have detected and are studying them.

Its geometry is interesting as it seems to exist in an alternate spacial-temporal domain. Everyday reality is over the XYZ domain but this domain/geometry is over an XYT domain. Its the difference in “domain” that causes it to be virtually undetectable normally (having evaded earlier surveys), forming hairs as they are called as they traverse a planet's gravity well.

It is the nature of this interaction (you might have also heard the word “complexity” as well) that is problematic. We believe it to be a conscious interaction, what most scientists aren't telling the public. Being directly informationally connected with this much “interactivity” leads to a biological overload which is the root cause of our nightmares, pain, confusion and paranoia.

We believe that quantum entwinement also has something to do with it, but we are unaware of the exact mechanism at this time (ie instantaneous transmission of information).

Q: How will the Directive be accomplished?

A: Due to the insidious nature of the problem, how it evades our collective ability to understand and combat it, we know that we cannot engage it institutionally. At least in the conventional sense of the word.

Scientists individually are aware of the issue and are, in their person, applying it to their data and findings. This is how we are aware of what is going on.

Since we cannot bring our academic, defensive and governmental institutions into this struggle, we will have to work on developing the skill sets critical to intercommunicating at the team, or committee, level. It is through this strategy that the Directive can be accomplished.

Small teams of scientists and other professionals/amateurs will be able to ascertain (1) what is going on, (2) the scientific foundation necessary to the discovery and analysis phases which will lead to (3) closure, where everyone will be aware of the necessity of discontinuing research on institutional levels that is intensifying the phenomenon.

We would invite all of you reading this document to form/join a team scientifically investigating the issues presented here, searching for the necessary physical resources like computing and scientific equipment necessary to accomplishing the mission statement.

Feel free to contact us for advice and support as we are looking to increase the levels of communication between our teams.
